Before repair or inspection, make sure to follow the instructions so that customers and Engineers in charge of repair or inspection can avoid suffering any risk or injury. 1. Use specified parts. The system uses parts with special safety features against fire and voltage. Very often issues with Boss Audio Systems CX3500D begin only after the warranty period ends and you may want to find how to repair it or just do some service work. Even oftener it is hard to remember what does each function in Car Amplifier Boss Audio Systems CX3500D is responsible for and what options to choose for expected result. Fortunately you can find all manuals for Car Amplifier on our side using links below. Login to post Boss PSA adapter because I know that many people need to repair their If you have experience with electronics then open it up and start testing all the components with a digital multimeter to find the failed components. Unfortunately the newer DD3s are harder to fix then they once were. There is no place to point you other than just to start testing everything. Hard to say what has failed. The signal into the input of the circuit may simply be shorting to the output. Maybe the switch or switching circuit has a fault. Here is the schematic as a reference All amps are exactly the same and the manual only differs for specific specs and db ratings!!Boss PSA adapter because I know that many people need to repair their When I hook it up to the 9v apaptor, a boss it freaks out and does nothing. Can you help Everything seems solid.It should be as close to 9 volts as possible. Also make sure that the hole in the plug is negative and the outside is positive. Is it the right adapter. I dont have a schematic for this model but www.schematicheaven.com has one for a DD2. Hopefully they havent changed too much. If you decide to repair it yourself, check the adapter first then check for a bad solder joint where the adapter plug is soldered to the circuit board. Hope this helps somewhat.<http://etudbilgisayar.com/upload/craftsman-15215-manual.xml>

If problem persists, read the following troubleshooting tips which may help eliminate the problems. Lowlevel RCA input wiring is preferred for best audio performance. Always use a highquality RCA cable for best audio performance. Protection LED comes on when amplifier is powered up. Check for short circuits on speaker leads. Turn down the volume control on the head unit to prevent overdriving. Remove speaker leads, and reset the amplifier. If the Protection LED still comes on, then the amplifier is faulty and needs servicing. High hiss in the speakers. Disconnect all RCA inputs to the amplifiers. If the hiss disappears, then plug in the component driving the amplifier and unplug its inputs. It is best to set the amplifiers input level control as low as possible. The best subjective signal to noise ratio is achieved in this manner. Try to set the head unit as high as possible without distortion and the amp input level as low as possible. Squealing noise from speakers. Check for improperly grounded RCA interconnection

Check that the Input Level Control is set to match the signal level of the head unit. Always try to set the Input Level as low as possible. Check that all crossover frequencies are properly set. Check for short circuits on the speaker leads. Amplifier gets very hot. Check that the minimum speaker impedance for the amp model is correct. Check that there is good air circulation around the amp. In some applications, it may be necessary to add an external cooling fan. Engine noise static type This is usually caused by poor quality RCA cables, which can pick up radiated noise. Use only the best quality cables, and route them away from power cables. Engine noise alternate when Check that speaker leads are not shorted to the vehicle chassis. Check that the RCA grounds are not shorted to the vehicle chassis. Check that the head unit is properly grounded. The fuse ratings for these amps is 40A using two 20A fuses for the CX2500D and 90A using three 30A fuses for the CX3500D. Although sufficient for normal working conditions, overloading the amp may result in blown fuses. Please try to avoid overloading the amp in this manner. Your CHAOS EXXTREME Class D amplifier is designed to run with a minimum load of 1 Ohm. Operating the CX2500D or CX3500D with a speaker impedance load below 1 Ohm may result in poor sound quality and damage to the amplifier circuitry. Such damage is not covered under the warranty for this product. Use a screw or mounting screw, inserted through each of the amps mounting holes, to mark the mounting surface. If the mounting surface is carpeted, measure the hole centers and mark with a felt tip pen. 4. Drill pilot holes in the mounting surface for the mounting screws.

Place the amplifier in position, and attach the amplifier to the mounting surface securely using screws. 4. Check that the fuse holder is empty. What is included When first unpacking your new amplifier, please check first that the package contains all of the items below. Installation precautions. Before you drill or cut any holes, investigate your cars layout very carefully. Confirm that your head unit or other equipment is turned off while connecting the input jacks and speaker terminals. If you need to replace the power fuse, replace it only with a fuse identical to that supplied with the amplifier. Using a fuse of a different type or rating may result in damage to your audio system or your amplifier which is not covered by the manufacturers warranty. General precautions. Before installing and using your new amplifier, please become familiar with all the information contained in this manual. If this does occur, immediately unplug the power wires and send the amplifier to your local dealer or service center as soon as possible. Mounting the amplifier Make sure there is sufficient air circulation around the intended mounting location. Please try to avoid overloading the amp in this manner. Tips for making your system as safe as possible. If you must replace a fuse on the amplifier, you must use a fuse of exactly the same type and rating. A different type of fuse or rating may result in damage or cause a fire. Dont misuse the level control! Do not mistake the input level control for a volume control! It is designed ONLY to match the output level of your audio source to the input level of your amplifier.

Do not adjust this input level to maximum unless your input level requires it. Low Level Input Wiring. Low level RCA input wiring is preferred for best audio performance. Always use a high quality RCA cable for best audio performance. Remote Subwoofer Level Control Without Stiffening Capacitor With Stiffening Capacitor Chassis ground point. Battery Stiffening Capacitor. Chassis ground point. Bridging Two CX2500D or Two CX3500D Amplifiers To Audio Outputs of head unit or Subwoofer outputs of a signal processor.
